## **Reviewed Group number: 214**

ER model				
Review criteria	Error Examples	Reviewer comment		
Completeness	<ul><li>Missing entity sets</li><li>Missing attributes</li><li>Missing relationship sets</li></ul>	Missing: - Level attribute (StarSkaters)		
Correct modeling of entity and relationship sets	<ul> <li>Forcing weak entity sets. This will be characterized by the fact that the weak entity set has an artificial partial key that has no semantics.</li> <li>Modeling the support relationship as a tenary one between StarSkater, Event and trainer. This would allow skater to have more than one supporting trainer for an event.</li> </ul>	Correct use of weak entity, aggregate, and relationship set between StarSkater, Event , and trainer		
Key attributes	<ul> <li>Some entity sets don't have key attributes.</li> <li>Having child entity sets in a ISA hierarchy with keys.</li> <li>Having weak entity sets that have no or a full key, etc.</li> <li>Having foreign keys of other entity sets</li> <li>Having keys on relationship set</li> </ul>	All good		
Relationship Constraints	<ul> <li>Missing key constraints on important places (like Starskaters coaches one group and group is coached by one StarSkaters.)</li> <li>Missing participation constraints where needed – (i.e., each Canskater is assigned to a group.)</li> </ul>	Extra bolded arrow: - from aggregate set to Trainer		
Redundancy Free	<ul> <li>Storing duplicate information without justification</li> </ul>	extra SGroup Entity linked to StarSkaters		
ER notation	<ul> <li>Symbols or constructs that do not exist</li> <li>Note that using "Double lines" instead of a thick line for participation constraints, weak entity sets, etc., is fine.</li> </ul>	All Good		
Textual information	<ul> <li>Constraints, assumption and/or notes are not well listed</li> </ul>			
Others		lacks clarity in the ER diag		

Translation to Relational Schema				
Review criteria	Error Examples	Reviewer		
		comment		

Completeness  Missing relations Missing attributes  Key and foreign key constraints  Incorrect primary keys Missing foreign key references Referencing the wrong relation For example foreign key in Group relation refers to Skaters instead of StarSkaters, or competition name in the Compete relation refers to Competition instead of Events.  Relationship Constraints  Key and participation constraints are not correctly translated:  Key and participation constraints are not correctly translated:  Key constraint with participation constraint: Relationship set is merged with the entity set Key constraints without participation constraints, relationship set could be merged into the entity set with the key constraint or keep them separated. It should be kept seperated if there are many entities that do not have a relationship. Otherwise, it should be merged.  Textual information  Constraints, assumption and/or notes are not well listed			1
